[Health Systems Evidence](#), the world's most comprehensive, free access point for evidence on how to strengthen or reform health systems or in how to get cost-effective programs, services and drugs to those who need them, is a 'self-serve' resource that can help policymakers and stakeholders rapidly identify research evidence related to their work. This webinar will explore the key features of Health Systems Evidence, including how to make the most of its many search functions and how to keep up with evidence in your particular area of interest.
